

## SCIO Automation Group presents their portfolio for production and assembly automation at Motek 2023

*Frankenthal, August 31, 2023.* International automation platform SCIO Automation will present its portfolio for production and assembly automation at Motek in Stuttgart, Germany, from October 10 to 13, 2023. Their joint booth 5501 in, hall 5, from SCIO brands Autkom, Industrial Automation, MRB Automation, VESCON Automation, VESCON Systemtechnik and tmp has been specially designed so that trade visitors can expect customized special machinery solutions, high-precision systems, system integration and automation solutions, as well as support services for a machine's entire life cycle.

At booth 5501 in hall 5, Motek visitors can experience the integrated solutions, product and service portfolio from SCIO Automation's Discrete Automation business segment for production and assembly automation, as well as mechanical engineering. These kinds of intelligent solutions can be seen throughout a machine's entire life cycle, and are aligned with it. SCIO's portfolio from the **Discrete Automation business segment** is split into three areas: Automation Systems, Automation Solutions and Automation Services.

"Within the Group, and especially in the Discrete Automation segment, our Group companies work very closely with one another, and collaborate on joint projects at various stages, from planning to development, realization and implementation, to after-sales. Our customers benefit from the group's cutting-edge expertise and the fact that we're always close to our client base geographically, with over 30 locations worldwide," says Antonio Cavotta, Head of the Discrete Automation business segment, and Managing Director of VESCON Systemtechnik and VESCON Automation.

**Automation Systems** includes special machinery solutions and high-precision systems such as alignment and calibration systems, measuring and testing systems, production lines and robotic cells from SCIO brands MRB Automation in Ilmenau, VESCON Systemtechnik based in Albersdorf-Prebuch (Austria) and Industrial Automation (USA/Mexico). SCIO has been successfully serving customers in the North American market for many years now, as a result of its foothold in the USA and Mexico.

The **Automation Solutions** segment specifically includes SCIO's electrical installation and programming solutions for body shell lines, as well as e-mobility and battery assembly. VESCON Automation is one of the pioneers of e-mobility, and has been developing battery assembly technology alongside leading OEMs for years and has built up a vast knowledge base. The portfolio also includes manufacturing automation, and HIBERION smart production software from VESCON Systemtechnik. The potential of these systems for when it comes to optimizing production and processes, including the PDL tower that comes with it, will be shown off at Motek in conjunction with a system that has been specially developed for the trade fair presentation, and visitors can try it out themselves.

**Automation Services** cover a plant's entire life-cycle, including after-sales. In addition to PLC programming (Autkom, tmp) and developing a proprietary PLC framework (tmp), safety services for machine safety (tmp) and other after-sales services, the focus of the presentation will also be on VESCON Automation's virtual engineering solutions: Motek visitors will be able to see the group's virtual commissioning and Digital Twin services first hand, as well as their 360° collaboration software S03 for project engineering and management.

"We have set ourselves the goal of not only presenting solutions and services at Motek, but we particularly wanted to focus on emphasize how our systems can be linked and integrated with one another, and throughout the entire lifecycle. So, we're looking forward to showing trade fair visitors our service portfolio, and showcasing our vision of an intelligent and connected smart factory at the same time," says Antonio Cavotta.

#### **About SCIO Automation GmbH**

SCIO Automation Group is an international E2E automation platform that passionately believes in its mission to support companies on their journey towards Industry 4.0. As a system integrator, SCIO automates production and logistics processes. As an innovator, SCIO develops value-added and customized automation products for the Autonomous Mobile Robots, Software and Cleanroom sectors, as well as for Food Intralogistics and Industrial Labeling. The SCIO platform currently comprises ten medium-sized company brands, totaling more than 1,100 employees at 30 locations in eight countries worldwide, all of whom play a part in implementing the Smart Factory concept for global players and hidden champions in a wide range of industries.
